ECS CK-1 COMKEYS

- **Quick Touch Read**
- **Outdoor All-Weather Operation**
- **Easy “Plug and Play” Installation**
- **Stainless Steel Construction**
- **Bi-Color LED**

The ECS ComKey Reader offers value and reliability that is unmatched by any credential reader in the industry. The ComKey reader's stainless steel construction and design provide both unlimited durability as well as tested resistance to vandalism.

Upon the simple touch of a ComKey Credential the reader communicates a unique PIN to the access controller. The ComKey credential uses Dallas Semiconductor iButton technology and is a dime sized stainless steel can containing a microchip encoded with the unique PIN which is mounted to a sturdy plastic key fob. The entire ComKey is just 1½ long and fits easily on any key ring.

Designed as a convenient alternative to less durable access card readers, the ECS ComKey Readers can stand up to the harsh temperature and moisture environments. ECS ComKey Readers are available in two sizes: Slimline (CKR-20S) for door mullions and full size (CKR-20F) for use in single gang boxes.

All ECS ComKey Reader electronics are protected for demanding environmental applications. They are easy to install and will last a lifetime.
